

COVER LETTER

Date: July 3, 2025

To,

The Accenture Recruitment Team

Subject: Application for Winter Internship 2025 – Technology and Song

Dear Team,

I hope you're doing well. I'm Aman Antuley, currently pursuing Computer Engineering at Anjuman-I-Islam's School of Engineering and Technology. I'm writing to express my interest in the Accenture Winter Internship 2025 under the Technology and Song program.

What really excites me about this internship is the unique blend of technology with creativity and purpose — something I truly resonate with. Over the past couple of years, I've built and contributed to projects like PerfectFit, an AI-powered tailoring service, a task optimization system that detects team emotions using AI, and several community-based web apps like Neki Hub. These experiences have taught me not just how to code, but how to solve real problems that make people's lives better.

I've worked with Python, Flask, MongoDB, and a range of modern tech stacks, both in internships and hackathons. But beyond the tech, I love working in teams, learning from others, and thinking about how to design better systems — not just smarter ones.

I'm really looking forward to an opportunity to be part of Accenture's culture of innovation, mentorship, and meaningful impact. I'd be thrilled to contribute, learn, and grow through this internship.

Thank you so much for considering my application. I hope to bring my passion and ideas to your team soon.

Yours Faithfully
Aman Antuley
